Minimum:

OS: Windows XP or above

Processor: Intel Pentium 4 or newer

Graphics: Direct X compatible

Storage: 120 MB available space

English,German,French,Portuguese

A Wise Use of Time

by Jim Dattilo

[Show Stats](#) [Restart](#) [Achievements](#)

Hailey climbs a set of tall wooden steps to the stage, stops, and turns for a photo. She continues to climb the stairs ahead of her entourage, and as she raises her foot to the top step, her shoe catches the head of a bent nail. Her body rotates, and she pitches sideways, ready to fall off the high point of the stage.

With the scene frozen, you decide to...

- Stand her back up on the stage and return to my spot in the crowd. I would rather remain anonymous.
- Catch her and restart time. Why not get credit for the save?
- Take her jewelry while time is stopped. It must be worth a fortune.
- Move Boom in position to make it look like he pushed Hailey.

Beautiful art,nice music with good story.

You can play it only right hand to click,enjoy the story slowly.. This game is a port of an ios\android\ouya based robot-focused doom clone with around 4-5 weapons.

PROS:

Having this game on pc is amazing because the controls of the mobile ports are hard to use compared to keyboard and mouse. the game plays like doom 1-2 only simpler, with less weapons, and each level is rather small with your only objective being to destroy the generator and make it to the next level's elevator while finding broken walls to shoot, offering secrets.

That being said, the game is fun with each weapon serving a purpose. there's the ammo-regererating shotgun thats the basic weapon, the rapid-fire projectile-based plasma rifle, the grenade launcher (which is AMAZING and infinitely better than quake's) and the BFG-type weapon, and those are the only one's i've come across yet there may be more.

The game is definately worth the 5 bucks and the 4 player multiplayer, while it does work, may or not have cheat protection, and while the split screen from the mobile version is as of yet unimplimented, the bot matches are great, and I haven't tried out the LAN.

The multiplayer game modes are instakill, mutant, and deathmatch so far, and while basic and limited to 4 players they are fun. I'm not sure about the lag or if the servers are dedicated, but its fun.

The game is a basic pick up and play great for coffee breaks or for kids, since the main singleplayer has only robots. Just dont let them play deathmatch, that has blood.

ALSO THE GAME HAS BUILT-IN FOV. ITS NOT 4:3 FOV AND IT MAY OR MAY NOT BE VERTICAL, SO IT GOES FROM 60 TO 90. 90 being true 90, not 106.26.

CONS

Now for the cons. Game is probably pretty short and on my machine is capped at 60 fps, although since it's a unity engine game your mileage may vary. Being a Unity engine game, the only options are for built-in resolutions (nothing custom) and i didn't see a 4k option. Also, there is only one quality option, ranging from low to ultra, and a bloom, vsync, and head bob quality toggle as well as fxaa and smaa. the PC options are severely lacking, and I'd love to see a way to turn off the depth of field. I suggest using MEDIUM because that disables all the stupid graphics effects like depth of field while keeping the main textures and core graphics the best they can be.

The resolutions can easily be bypassed by holding SHIFT when clicking on the game's main .EXE, albeit with a few graphical glitches related to FLATS (specifically the blue robot blood on the floor)

also, i'm not sure if cheating will be a problem.

And also, the game, while being a measely 5 dollars, is a mobile game with much more simplicity and lack of features than pc gamers are used to, and it's a unity engine game.

Also, the multiplayer only supports 4 players and i'm not sure there's a way for steam friends to join you.

These are the things i'd like to see:

1. steamworks

the addition of steamworks will only improve the multiplayer.

2. more video options

I do not dislike this game but currently in the games state right now, it is not worth \$5

This was a fun game for what it is. A basic RTS. I got this game from keymailer for free but im going to make an honest review. Firstly I love the fact that you get to choose your nationality. You do have to think about what your next move will be. The game isn't easy

But then comes the problems

First off you are thrown into the game no tutorial, no help button, no nothing The U.I is limited and when you build a building it doesnt even show up on the background.

Next I LIKE the combat system. But it needs much more polish. It has no animations no RTS just place your dudes and watch them fight.

Overall Dev please add a tutorial, add more to the U.I and background and polish up the combat system. Then this game will be worth \$5.

Buy it on SALE

Also if you want to watch my livestream of the game here is the link- https://www.youtube.com/watch?v=hrTbnaS_Jvk. Pleasant graphics, good variety of mechanics and environments, and tons of fun with friends. For only 10\$ I'd definitely recommend it.. It's a fun little game. But it's little. There's barely any content so treat it more like you would space pirate trainer, a replayable arcade style shooter. Get it on sale.. **WORKED FOR A WHILE THEN CONSTANT FLICKERING/ ASKED FOR REFUND BUT ANY GAMEPLAY LONGER AND TWO HOURS THEY REFUSED! NOT AT ALL HAPPY AND WONT PURCHASE ANYTHING ELSE THROUGH STREAM**

. The story was okay for baby yaga but my God the collectibles were just a task and there was nothing intuitive about then. Simple and short but super cute.. **A B A N D O N W A R E**
